

# PARACHUTE

# GENERAL PRINCIPLE

For a second season, PARACHUTE exceptional games. The most perilous of all time in a new configuration on television for 2 duo candidates!

At the same time, one candidate plays on the TV studio in front of an extraordinary game mechanics and the other candidate plays at very high altitude aboard a helicopter or a plan, at 4000 meters in the air to throw him in the vacuum to more than 200 kilometers /hours with a parachute.

It is a staging very rich in emotion and adrenaline! For the first time on television PARACHUTE a great perilous game with a vertiginous show.

# THE PRINCIPLE

**Participants of the game:** 2 candidates in duo, a professional parachutist, a presenter and a public (all public advised).

To start the game, a candidate duo is parachuted in the studio. The presentations are made, then a candidate decides to play on the studio and the other one joins an aerodrome near the TV studio!

The candidate who is designated for the parachute jump is supported throughout this unique adventure to be prepared in the best conditions. This implies to be prepared for notions of altitude, speed, safety...

Parachute jumping is a risky discipline that requires a candidate's commitment and a medical certificate for the parachute jump is requested beforehand. In addition, the maximum weight allowed is 105 kg for this candidate. The weather conditions it is not very restrictive but it must be acceptable with a wind of reasonable intensity and not too many low clouds to ensure the safety of the candidates.

Because, in addition to achieving this feat, if the candidate studio goes to the end of the game, the parachuted candidate must answer a question stated by the candidate in the studio during his jump that lasts 40 seconds. **Throughout the game there is no contact between the 2 candidates except during the 40 seconds of the jump parachute!!!**

# THE MECHANICS OF THE GAME

The studio candidate is alone in front of an exceptional game mechanics. This candidate is accompanied by the public and the animator.

3 successive questions with a growing number of answers. On the TV studio, these answers are materialized by balls of color that are located at each end of the plateau PARACHUTE. The main difficulty is not to find the right answer but to follow the good ball answer until the end of the race because from their departure all the balls will darken. They will resume their respective colors only after the choice of ball.

After the candidate has chosen to follow one of the proposed answers, the answer

balls will darken and will be launched in the infernal spiral of the board's center for 15 seconds to finish their crazy race against the board, and position themselves side-by-side. As you will have understood, the first difficulty is to follow the good ball response in the middle of the other balls in motion.

The 3 questions will have a decreasing level of difficulty and an increasing number of proposed answers:

Question1.....2 possible answers ..... 2 answer balls .....Medium difficulty question

Question2.....3 possible answers ... 3 answer balls .....Easy question

Question3.....4 possible answers .... 4 answer balls .....Very easy question

The balls have a diameter of about 50 centimeters. They are all different colors and each materializes an answer with a letter.

*Example :* Which doctor discovered the antibiotic penicilin? **P**A**S**T**E**U**R** **F**L**E**M**I**N**G**

In a question configuration with 2 answers proposed. On the TV studio, there is a red ball and a yellow ball.

Example : A 60 euros jeans is sold at 45 euros! How much do i save ?

15% 25% 30% 35%

In a question configuration with 4 answers proposed. On the TV studio there is a red ball, a yellow ball, a blue ball and a purple ball.

In the action, there is a discussion between the animator and the candidate who must choose a ball answer, if possible the correct answer!

As soon as the balls escape in a vertiginous descent, they darken to become completely opaque and black. The black ball goes down quickly in the center of the curved plate, collide, mix ... and rank in the front of the board. Now, the candidate must choose the position of the right answer ball supposed...

After candidate's choice, the balls take their respective departure color and we find out if the selected ball is the correct answer to the question.

# THE EMERGENCY PARACHUTE (THE MONEY RESERVE)

Each good answer can earn 1000 dollars to build a pot called the parachute rescue.

To win 1000 dollars, the right ball answer to the question has to be found. 4 scenario cases may occur:

- The candidate knows the answer and finds the right answer ball, he wins 1000 dollars.
- The candidate knows the answer but cannot find the right answer ball, he does not win anything.
- The candidate does not know the answer but luckily finds the right answer ball, he wins 1000 dollars.
- The candidate does not know the answer and does not find the right answer ball, he does not win anything.

Failure to not find the right answer ball does not penalize the candidate except to not increase the amount of his prize pool.

Not knowing the right answer will not penalize the candidate neither, but he will need some luck to find the correct answer ball.

During the game, we can follow outdoor candidate's evolution on the screen, from his plateau departure to his return: briefing phase, equipment, installation in tandem with a professional, taking off to reach an altitude of about 3000 meters, the parachute jump ... The screen also displays questions and answers.

At the end of the 3 questions, the candidate in the TV studio knows the final amount of his reserve parachute.

# THE DEAL

Now the candidate has to make a decision, resting on his shoulders only. The deal is as follows:

- Either he decides to keep the sum of the rescue parachute and share it with his duo friend.
- Or he decides to abandon the reserve parachute and then he plays at the multiplier. The pot will then be multiplied by the coefficient that he has discovered. The jackpot can be multiplied up to 10 times, and then it will be the turn of the outside candidate to play in the air and jump to parachute.

In any case the parachutist candidate jumps! The studio candidate must make the decision alone, but he personally agrees for both candidates.

I remind you that at this stage of the game, there was no contact between the

two candidates (One candidate is in the TV studio, the other one is in the air with the plane at 4000 meters altitude)

Accuracy: The leader may also ask the pilot to return to the base without the parachute jump, if the candidate's plateau did not find any answer ball, so a jackpot of 0 dollar.

# THE MULTIPLIER COEFFICIENT

In principle, it's exactly the same game mechanics as before but without the questions.

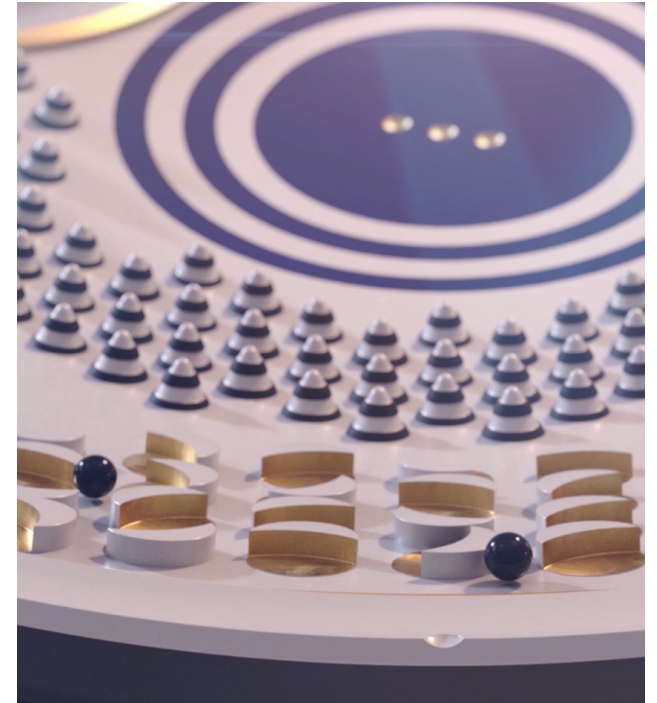

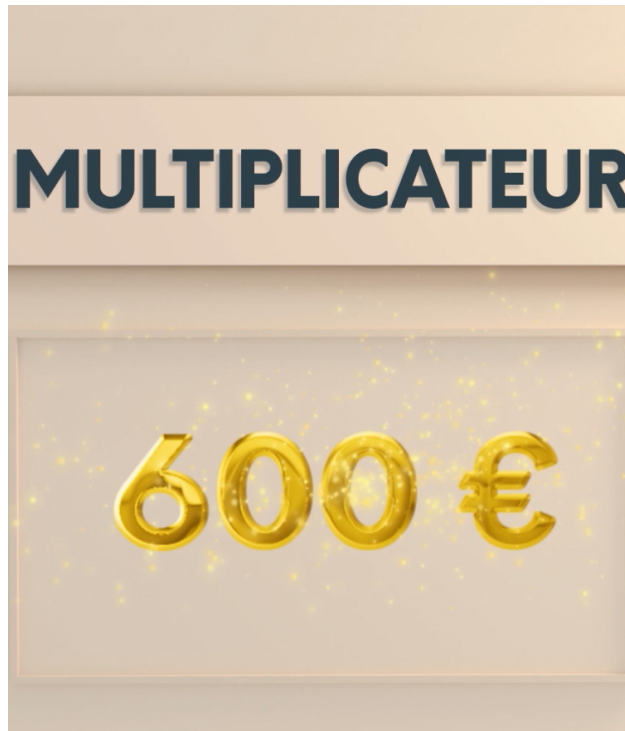

There are 4 colored balls that indicate different multipliers  $\times 2$   $\times 3$   $\times 4$   $\times 10$ . Of course, all the candidates who will arrive at this stage of the game will try to flush out the ball to multiplier  $\times 10$ !!!

At the start, the four balls darken, they roll, turn, collide in a crazy race, they slow down and position themselves side by side.

At the end of candidate's ball choice,

the balls resume their respective colors of departure and multiplier coefficient appears. The amount involved is the amount of the pot (the reserve parachute) multiplied by this coefficient multiplier!

Accuracy: With 3 good response balls and a multiplier of 10, this game can offer up to **30 000 dollars of gain!**

# JUMPING TO PARACHUTE

At this game level, the plane is at the stationary position, the candidate is at 4000 meters altitude, the tandem jump will last exactly 40 seconds before the parachute opens. The candidate is equipped with a headset that allows him to hear the question.

When the candidate parachutes, the candidate studio tells him the question and the possible answers. At this altitude, the candidate must master his emotions related to the jump in the void, adapt to a speed of more than 200 kilometers/hour, and must propose an answer during those 40 seconds before the parachute opens.

*Sample question:* What is the ideal cooking time for a boiled egg ? **1 minute**  
**2 minutes** **3 minutes** **4 minutes**

The answer is gestural; the candidate indicates with these fingers the right answer number (facing the camera on board) because it will be impossible for him to speak at this speed.

Accuracy: The candidate may refuse to perform the parachute jump by apprehension, fear, panic ... In this case the

pilot of the helicopter returns to the base directly. Of course, the sum at stake is lost. The parachute opens after a jump of 40 seconds, and then the rest of the descent is done more smoothly until landing. If the candidate answers after the parachute opening (After the first 40 seconds of descent) the jackpot is lost. In the same way, if the candidate does not answer or if he responds wrongly then the win at stake is lost. It is during his landing on the TV studio, that the candidate will know the amount for which the duo played and the verdict if he answers correctly or not at the question allowing them to win the jackpot!
